

Android Process Management

Computers. Data Science and Engineering, UPC spring 2020.

Àlex Batlle Casellas

1 Introduction

Android is an operating system developed by Google, based on the Linux kernel and mainly intended for handheld, touch-sensitive devices. It has also developed in this last years towards other kind of devices: television, computers, IoT, ...

The main objective of this work is to look into Android process management, and we are going to adress several questions in order to structure the document:

- 1.
- 2.
- 3.
- 4.

2 Background

3 Process Management in Android Devices

4 Major Findings
